

WEGOBEE

SPECIES

MAMMALS

The Sun warms the Earth. Water in lakes and oceans becomes water vapor. Water vapor rises and becomes clouds!

BIRDS

Water can fall from clouds. This is rain! This is called precipitation. Now falling from clouds is also called precipitation.

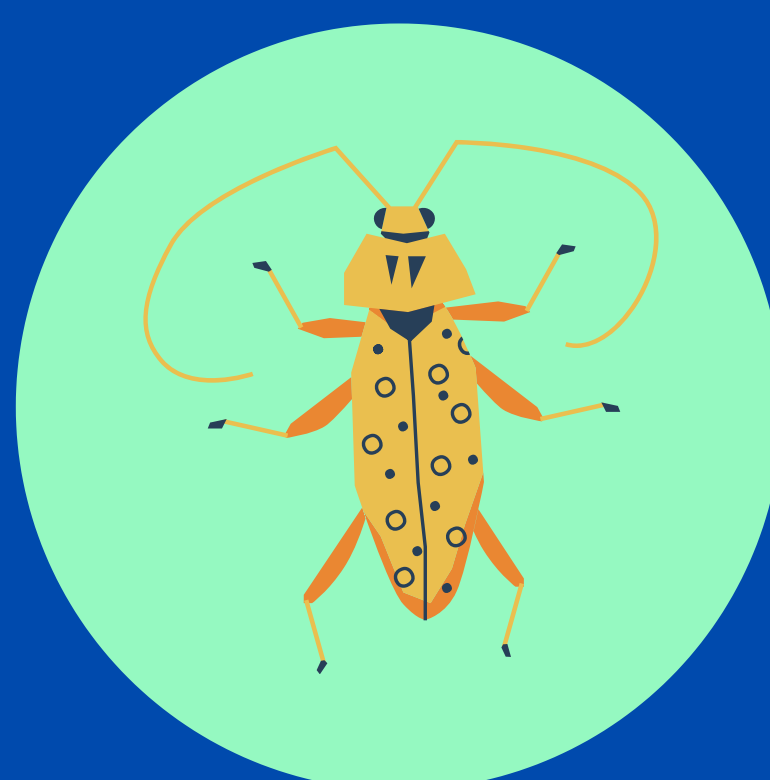

REPTILES

When water vapor cools it becomes water. This can make clouds!

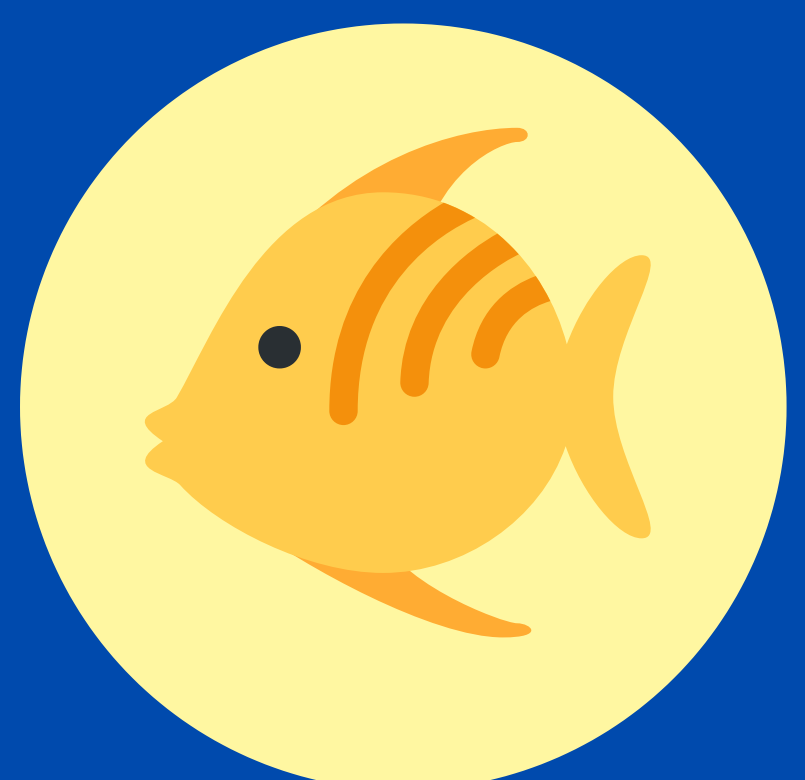

AMPHIBIANS

Water is in lakes, rivers, and oceans. Rain and snow are made of water. Water moves throughout the Earth and atmosphere in the water cycle!

INSECTS

Water that has been warmed by the sun and has become a gas is called water vapor. We cannot see water vapor.

FISH

Water that falls as rain and snow collects in river, ponds, lakes and the ocean! This is called collection!
